Interpretation Guide

AI-in-One dashboard v2.0.0

How to read every page and number, and turn what you see into a useful conversation.

Microsoft Copilot Analytics Team
October 2026

Read the report with confidence

Start with a question, keep the same people and dates, and read each number for what it is.

01 Start with a question

Who is using Copilot? Is it becoming a habit? Which agents need attention? Each page answers one question; the page guides tell you which.

02 Choose people and dates

Open Org filters to pick a company, division, department, reporting team, user or license. Your choices follow you to every page.

03 Read numbers in context

People, prompts and sessions measure different things. Groups overlap. Habit cards use one month. The definitions pages explain each one.

04 Turn it into a conversation

The report shows recorded activity. The people doing the work can explain it. Agree one change, then look again next month.

EDITIONS The pages, definitions and navigation are the same in the SharePoint, Local CSV and Fabric OneLake editions. Only the data connection differs.

CONTENTS

What's in this guide

Read the foundations first, then use the page guides as a reference.

FOUNDATIONS

- Getting around the report 04
- Privacy and Minimum Group Size 05
- The core numbers 06
- Trends and habits 07
- Licenses and experiences 08

PAGE GUIDES

- Copilot Usage Explorer 09
- Copilot overall (3 pages) 10
- Agents (6 pages) 13
- M365 Copilot (3 pages) 19
- Copilot Chat (3 pages) 22
- Metric Glossary & Guide 25

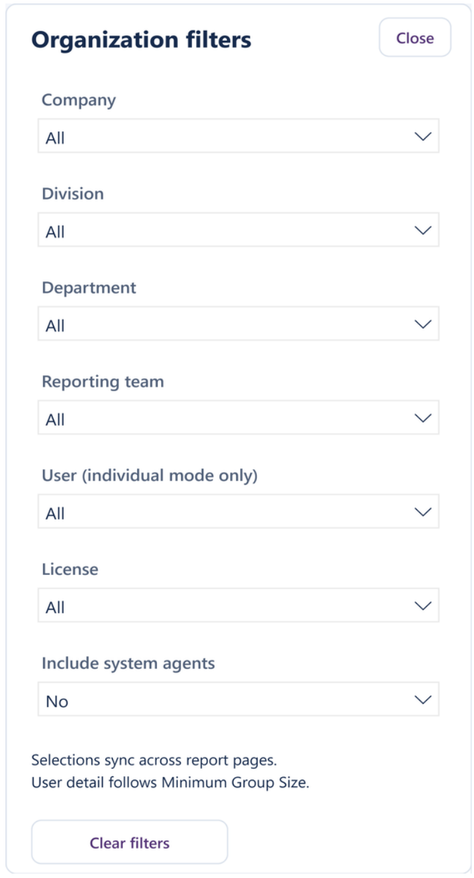

PUTTING IT TO WORK

- Common questions 26
- From numbers to conversations 27
- What the report doesn't measure 28

TIP In each page guide, the numbered outlines on the screenshot match the numbered explanations beside it.

Getting around the report

These controls work the same way on every analytical page.

1 Org filters

Opens company, division, department, reporting team, user, license and Include system agents. Close keeps your choices across pages.

2 Reporting team

Search for a manager at any level to include everyone who reports to them, directly or indirectly. The manager's own row isn't counted as their report.

3 Date slider

Drag the handles or type exact dates. Dates follow you across pages. Habit pages also name a separate habit month.

4 Clear filters

Resets selections, table drill-downs and Include system agents to No without leaving the page. In Desktop, Ctrl+click report buttons.

5 Activity status

Shows active users next to the people in scope, and explains when a group is too small to show or has no recorded activity.

6 Active filters

Lists up to three selected values per filter, then N selected. It includes choices made on other pages.

TIP Every report page also has a definitions page: open Metric Glossary & Guide and choose the page you're reading.

Privacy and Minimum Group Size

Two controls decide what each viewer sees: a group-size rule and row-level security roles.

MINIMUM GROUP SIZE

The smallest number of eligible people a group must have before the report shows its results.

3

Default

Team-level reporting. Groups need at least three eligible people. Individual activity stays hidden.

1

Approved detail

Individual views, such as By user and employee rows. Use only when approved.

Any

Your threshold

Any whole number of 1 or more. For example, 10 shows only groups of ten or more people.

It counts people in scope, not active users. A qualifying team of 20 can still show only two active users. Change the setting in Power BI Desktop: Home > Transform data > Manage parameters > Minimum Group Size, then Close & Apply and Clear filters.

ROW-LEVEL SECURITY ROLES

Reporting hierarchy

Viewers see themselves and everyone who reports to them, matched by sign-in name to the people data.

All data viewers

Executive sponsors, analysts and adoption leads see all users, including people with no place in the hierarchy.

Viewers see no data until they're assigned a role. Group size is a display rule, not anonymization; it doesn't replace access permissions.

CHECKLIST Confirm the approved Minimum Group Size and assign each viewer the right role in the Power BI service.

The core numbers

These names mean the same thing on every page.

People in scope

Everyone in the selected team, organization and license choice. Minimum Group Size uses this count.

Active users

People with recorded activity in the selected dates and experience. One person can be active in several experiences.

Prompts

Distinct audited requests, not agent responses. Purview coverage is not guaranteed to match Viva Insights or Microsoft 365 admin center.

Sessions

Conversations: one per person per conversation thread. A thread used on several days counts once in the period total.

Prompts per session

Prompts divided by sessions. More depth can mean useful work, retries or a hard task. It isn't productivity.

Active days per user

The average number of different days each active user had activity. It isn't time spent.

Repeat users

The share of active users with at least two sessions in the selected period. It isn't next-month retention.

Weekly prompts and sessions per user

Each user's distinct prompts or sessions divided by their active weeks, then averaged. Quiet weeks aren't counted.

Trends and habits

How the report shows change over time.

Daily lines and 7-day averages

Thin lines show each day. Bold lines average the last seven days, with quiet days as zero. Daily counts don't add up to the period total.

Month-over-month change

Compares prompts and sessions with the previous month for your selected dates. Read the dates; it isn't a target.

Habit month

The calendar month before the end of your selected dates, printed on each habit page. Dates ending 30 September give August.

Habit groups

Light: 1–5 active days in the habit month. Moderate: 6–10. Frequent: 11–15. Daily: 16 or more; it doesn't mean every day.

Habit shares

The share of active users in each group for the habit month. Don't add shares or monthly users across months.

Habit cards versus tables

Cards and previous-month bars describe the habit month. Department and agent tables cover the whole selected period.

Licenses and experiences

Who counts as licensed, and why the experience groups overlap.

License status is a snapshot

PAX Users carries Graph license assignments shown in Microsoft 365 admin center. Source-row and loaded-Users snapshots can differ; neither is event-time entitlement.

Unknown isn't unlicensed

When license information is missing, the person shows as Unknown. They aren't counted in unlicensed results.

Licensed chat

Recognized chat activity from people with a Microsoft 365 Copilot license. Agent activity is reported separately.

Copilot Chat (unlicensed)

Recognized chat from people without a license. Agents, Cowork, other products and unclassified activity are excluded.

Agent users

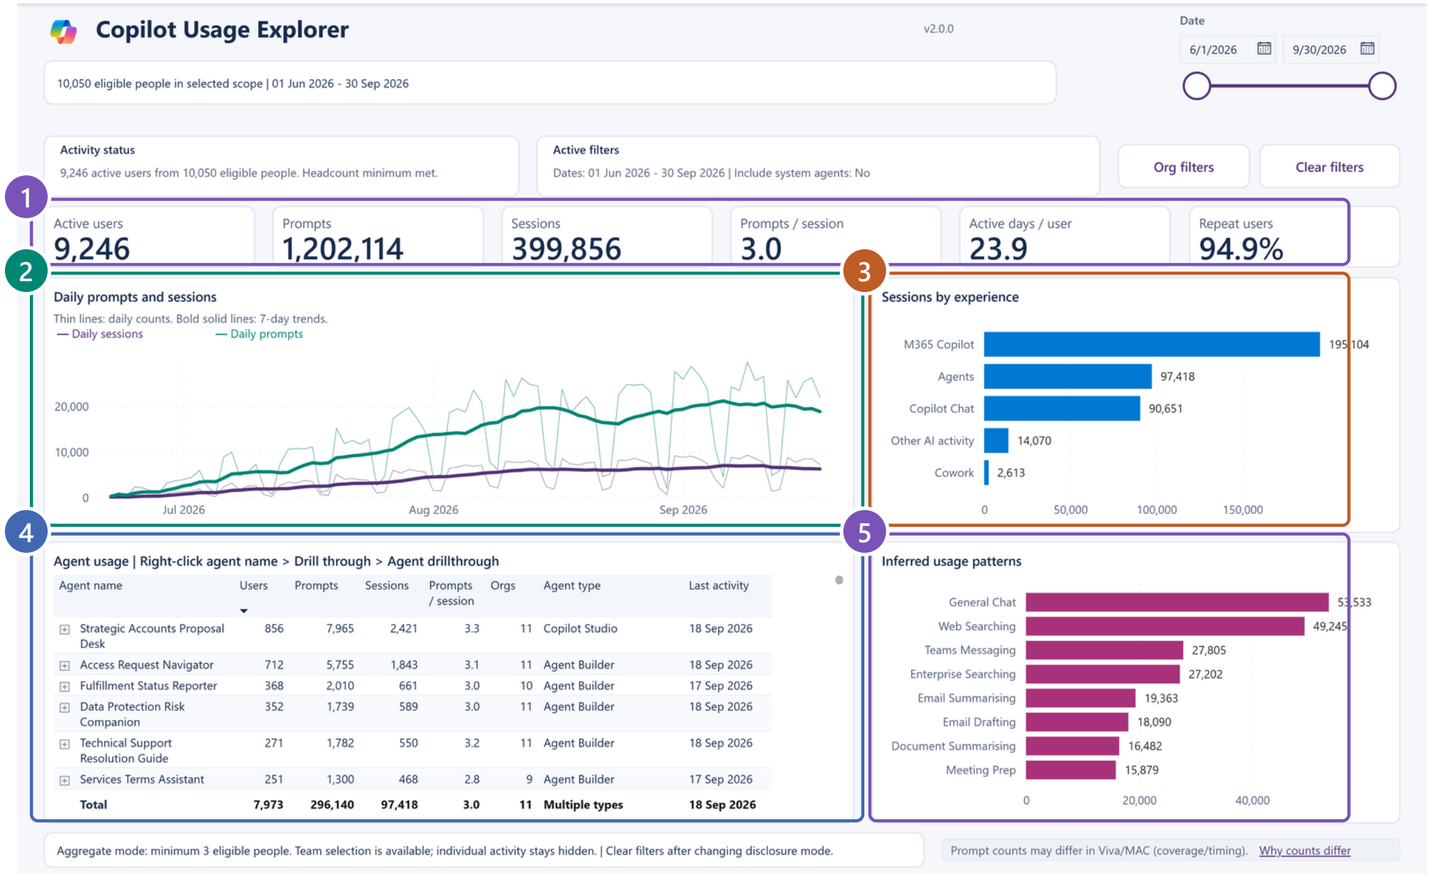

People with recorded agent activity, whatever their license. Agent adoption divides them by all active users.

Groups overlap

One person can use M365 Copilot, Copilot Chat and agents. Compare these groups side by side; don't add them up.

Copilot Usage Explorer

How is my team, a manager's organization or one agent using Copilot right now?

1 Six headline numbers

Active users, prompts, sessions, prompts per session, active days per user and repeat users for your selection.

2 Daily prompts and sessions

Thin daily lines and bold 7-day averages. Look at the weekly rhythm, not a single busy day.

3 Sessions by experience

M365 Copilot, agents, Copilot Chat, other AI, unclassified activity and Cowork. One person can use several.

4 Agent usage

Every agent your selection used, with users, prompts, sessions, organizations, type and last activity.

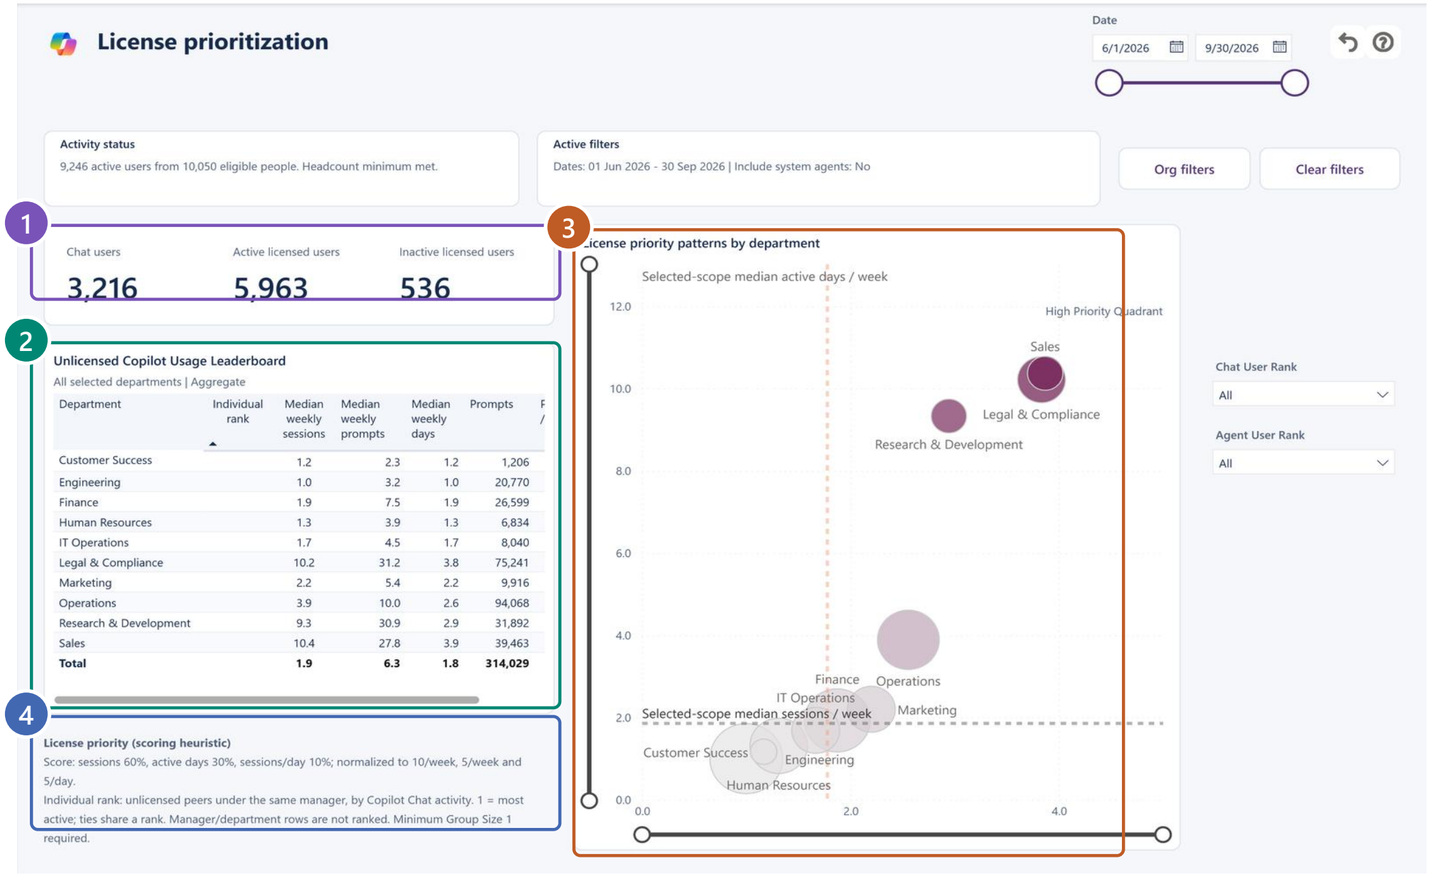

5 Inferred usage patterns

Likely tasks, such as searching or meeting prep, inferred from activity records. They are clues, not outcomes.

TRY THIS Open Org filters > Reporting team, search for a manager, then right-click an agent name and choose Drill through > Agent drillthrough.

License Prioritization

Which groups show usage patterns that could support a licensing conversation?

1 Chat, active licensed and inactive users

Chat users, active licensed users and inactive licensed users. Agent-only users are active; active plus inactive equals the licensed population.

2 Unlicensed usage leaderboard

Department summaries of Copilot Chat use from people without a license, with median weekly sessions and active days.

3 License priority patterns

Departments by how often and how regularly they use chat. Reference lines are your selection's medians, not targets.

4 How the score works

Unlicensed peers under one manager share dense ranks by Copilot Chat activity. 1 leads; ties share ranks. Blank totals have no pink fill.

! Read it carefully

Use it to start a conversation, with job needs, cost and feedback. Usage alone doesn't decide who needs a license.

TRY THIS Pick two departments near the High Priority corner and ask their leads which tasks would benefit from licensed features.

Copilot Overall: Combined Trends

How do M365 Copilot, Copilot Chat and agents compare over time?

1 Users by experience

Agent users, chat users, active licensed users and inactive licensed users across all experiences.

2 Sessions per user over time

Weekly sessions per user for agents, unlicensed Copilot Chat and M365 Copilot, without double counting.

3 Active users by department

Separate bars for each experience. They overlap, so they aren't stacked totals.

4 Frequency and intensity

Departments by how often and how much they use Copilot. Tabs switch between the three experiences.

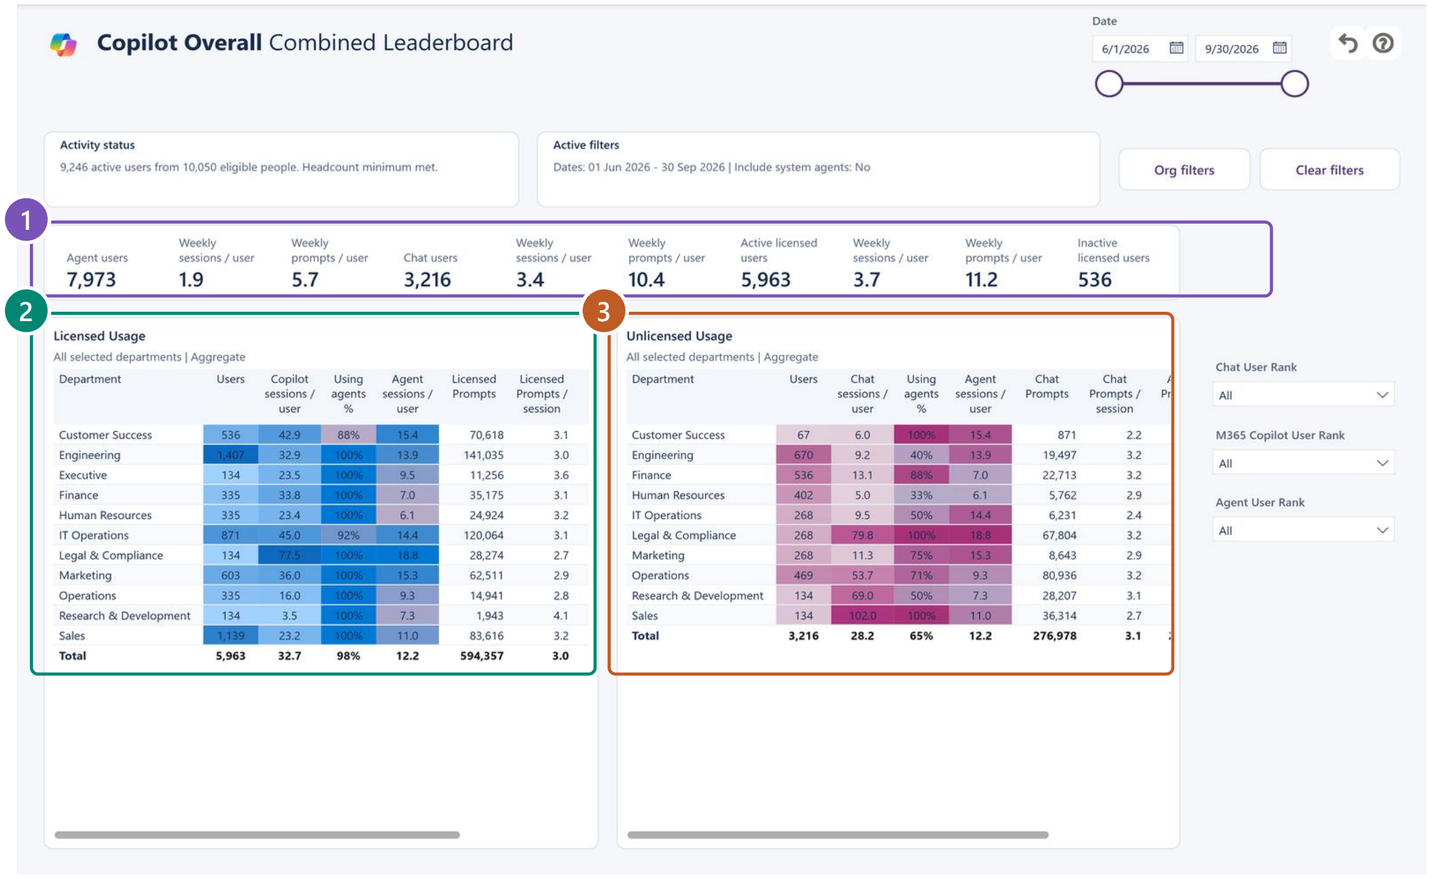

! Read it carefully

Don't add users across experiences, and don't assume people moved from one to another.

TRY THIS Compare one department across the three tabs of the bubble chart, then ask what explains the difference.

Copilot Overall: Combined Leaderboard

Which departments use each experience, and how many chat users also use agents?

Licensed Usage — All selected departments | Aggregate

Department	Users	Copilot sessions / user	Using agents %	Agent sessions / user	Licensed Prompts	Licensed Prompts / session
Customer Success	536	42.9	88%	15.4	70,618	3.1
Engineering	1,407	32.9	100%	13.9	141,035	3.0
Executive	134	23.5	100%	9.5	11,256	3.6
Finance	335	33.8	100%	7.0	35,175	3.1

IT Operations	871	45.0	92%	14.4	120,064	3.1
Legal & Compliance	134	77.5	100%	18.8	28,274	2.7
Marketing	603	36.0	100%	15.3	62,511	2.9
Operations	335	16.0	100%	9.3	14,941	2.8
Research & Development	134	3.5	100%	7.3	1,943	4.1
Sales	1,139	23.2	100%	11.0	83,616	3.2
Total	**5,963**	**32.7**	**98%**	**12.2**	**594,357**	**3.0**

Unlicensed Usage — All selected departments | Aggregate

Department	Users	Chat sessions / user	Using agents %	Agent sessions / user	Chat Prompts	Chat Prompts / session
Customer Success	67	6.0	100%	15.4	871	2.2
Engineering	670	9.2	40%	13.9	19,497	3.2
Finance	536	13.1	88%	7.0	22,713	3.2
Human Resources	402	5.0	33%	6.1	5,762	2.9
IT Operations	268	9.5	50%	14.4	6,231	2.4
Legal & Compliance	268	79.8	100%	18.8	67,804	3.2
Marketing	268	11.3	75%	15.3	8,643	2.9
Operations	469	53.7	71%	9.3	80,936	3.2
Research & Development	134	69.0	50%	7.3	28,207	3.1
Sales	134	102.0	100%	11.0	36,314	2.7
Total	**3,216**	**28.2**	**65%**	**12.2**	**276,978**	**3.1**

1 Headline comparison

Users, prompts, prompts per session and weekly prompt/session comparisons for agents, chat and licensed Copilot.

2 Licensed usage

Users, Copilot sessions per user and agent comparisons by department. Agent prompt cells also need this licensed row to meet the minimum.

3 Unlicensed usage

Chat users, sessions per user and agent comparisons. Agent prompt cells also need this unlicensed row to meet the minimum.

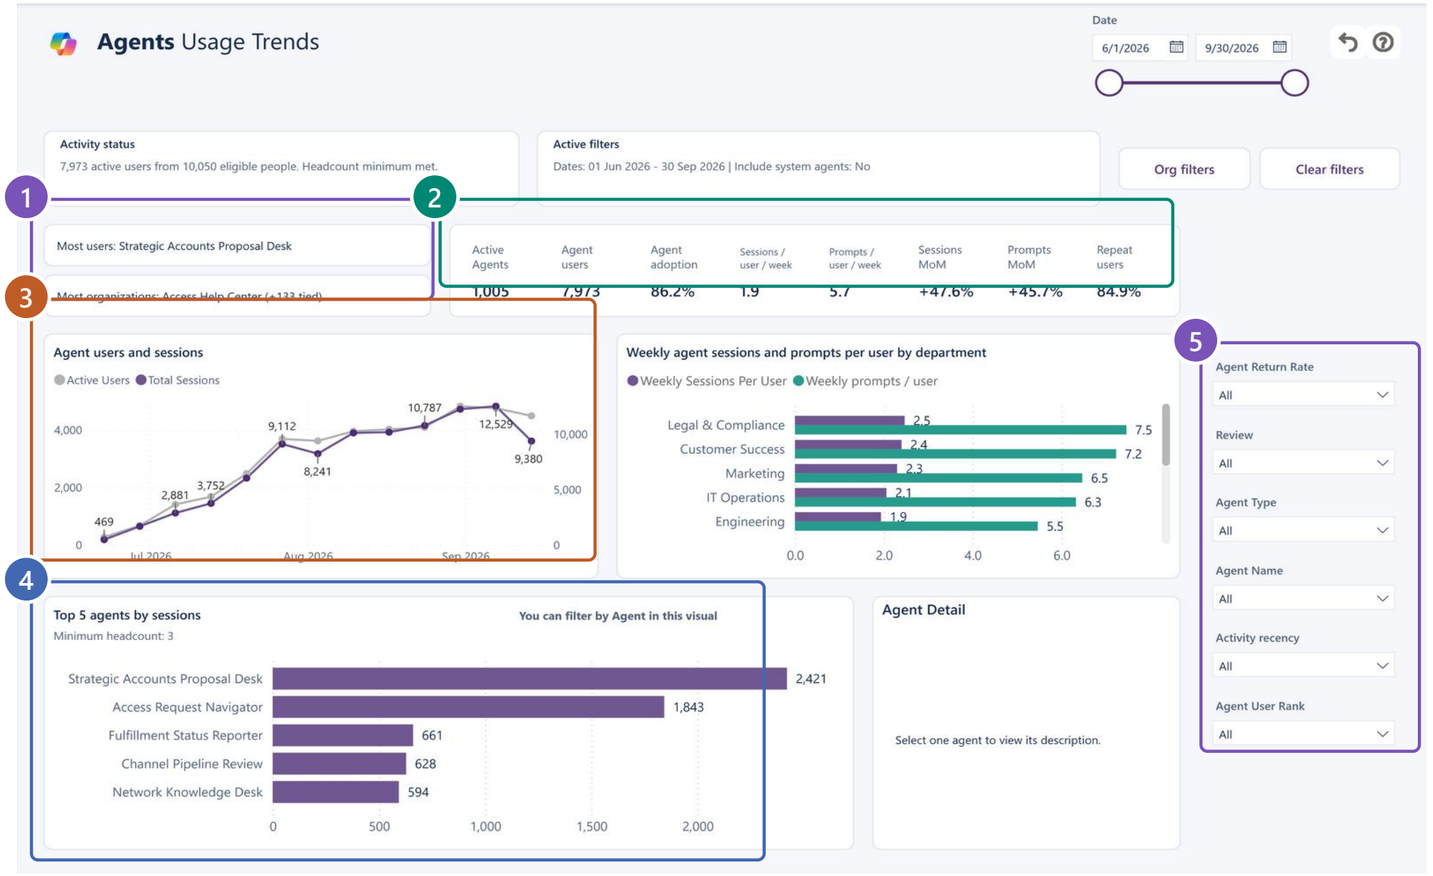

! Read it carefully

Each percentage answers one question: of this table's chat users, how many also used agents? Unknown license status isn't counted as unlicensed.

TRY THIS Find a department with high chat use but a low agent share, and ask whether an existing agent could help them.

Agents: Usage Trends

How many people try agents, and how many come back?

1 Most users and most organizations

The agents with the widest reach. Ties are shown. Reach isn't the same as volume.

2 Headline numbers

Active agents, agent users, adoption, weekly prompts/sessions, their month-over-month changes and repeat users.

3 Users and sessions over time

Whether agent use is growing across the selected dates.

4 Top 5 agents by sessions

Select an agent to filter the page and read its description under Agent Detail.

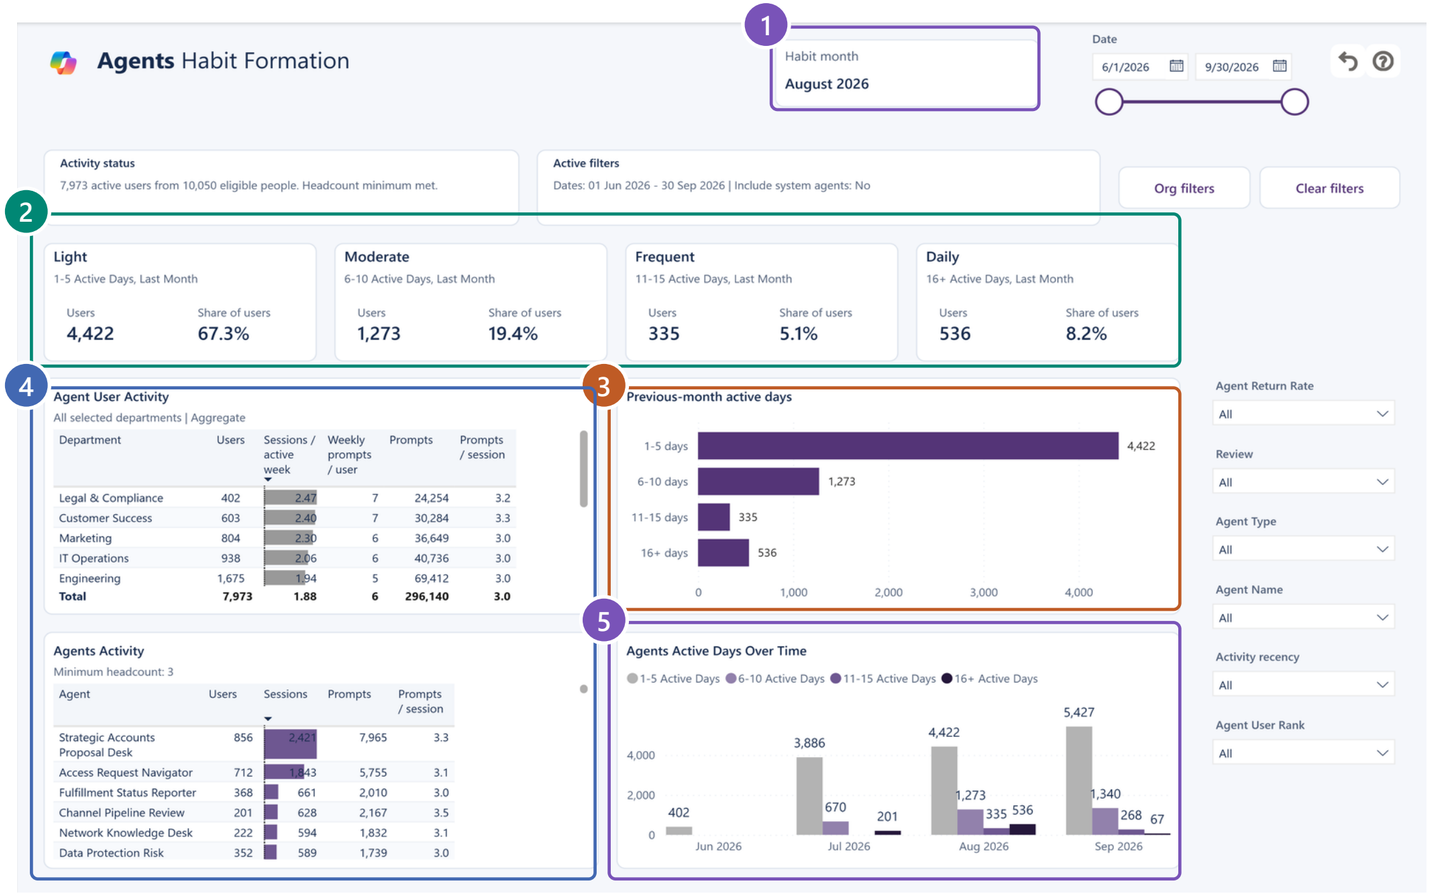

5 Focus filters

Return rate, review status, agent type, name, activity recency and user rank.

TRY THIS Compare reach with repeat use over several weeks, then open Agent Details for the agent that surprises you.

Agents: Habit Formation

How often do people use agents in a month?

1 Habit month

The month before the end of your selected dates. Cards and bars describe this month.

2 Four habit groups

Light 1–5, Moderate 6–10, Frequent 11–15 and Daily 16+ active days, with users and share of users.

3 Previous-month active days

Bars that compare the four groups directly for the habit month.

4 Activity tables

Agent user activity by department and by agent, for your whole selected period.

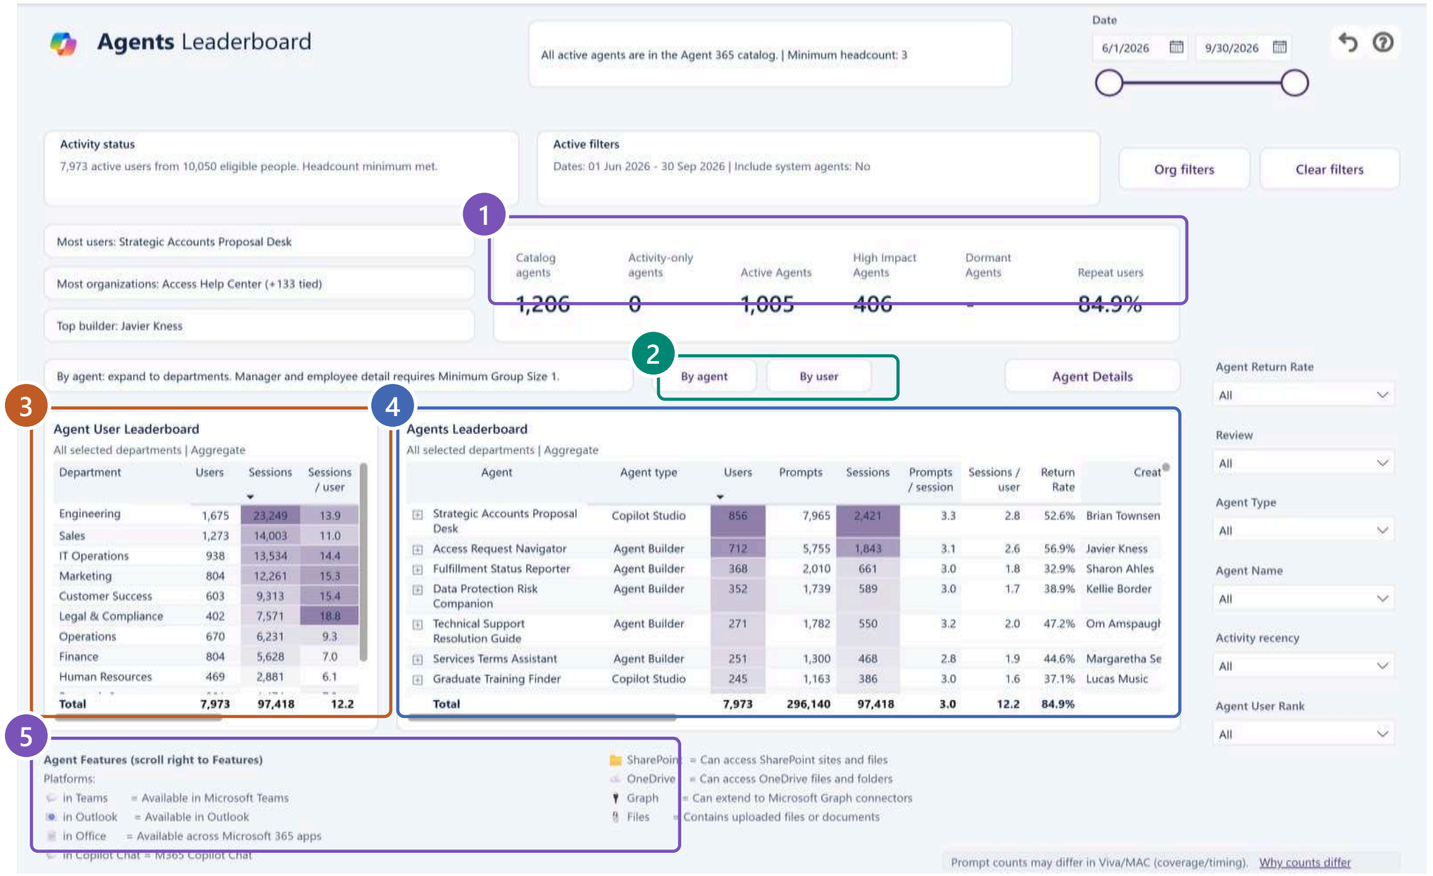

5 Active days over time

How the mix of habit groups changes month by month.

TRY THIS Set your dates to end on the last day of a month, then compare the Daily share with the month before.

Agents: Leaderboard

Which agents, and which people, lead on sessions and prompts?

1 Headline numbers

Catalog IDs differ from active agents. Active = matched + activity-only + ambiguous; system agents are excluded by default.

2 By agent or By user

By agent is the default. By user ranks people only with approved Minimum Group Size 1.

3 Agent user leaderboard

Compare department-level agent usage. Manager and employee detail both require approved Minimum Group Size 1.

4 Agents leaderboard

Usage, Features, catalog status and coverage. Scroll right for metadata and supported surfaces.

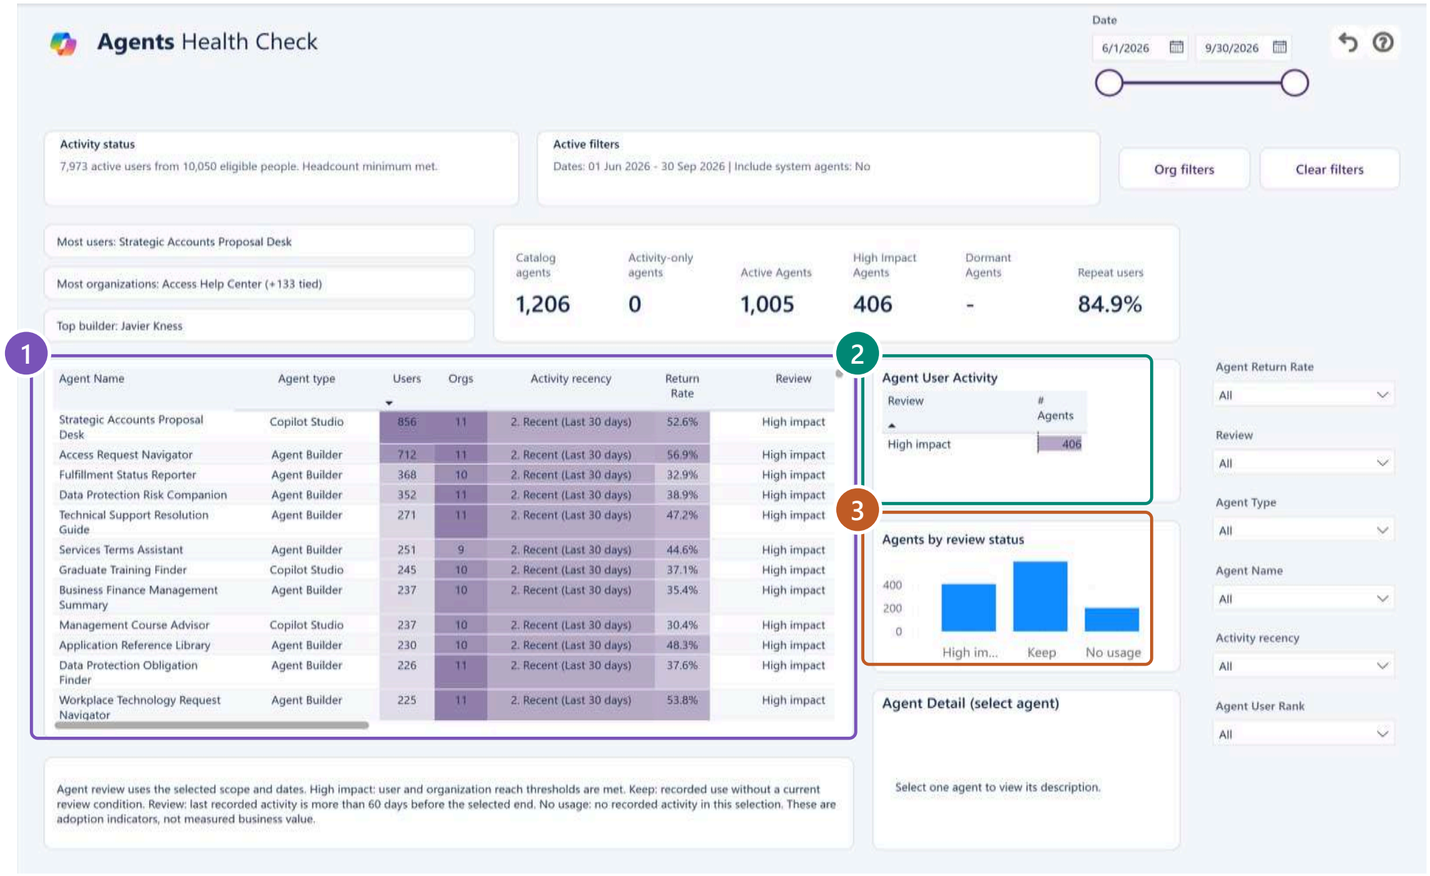

5 Agent features

Features are restored to the Leaderboard. Scroll right to match the supported surfaces to the legend.

TRY THIS Sort by prompts per session to find agents that hold longer conversations, then open Agent Details for one of them.

Agents: Health Check

Which agents should we keep, and which should we review with their owners?

1 Every agent with a review label

Build platform and catalog status are separate. Store agents identify a publisher, not a tenant creator.

2 Review labels

No usage: none recorded. Review: over 60 days. High impact: reach thresholds met. Keep: other usage-tracked, non-system agents.

3 Agents by review status

Counts use resolved IDs and the same selected dates, scope and access.

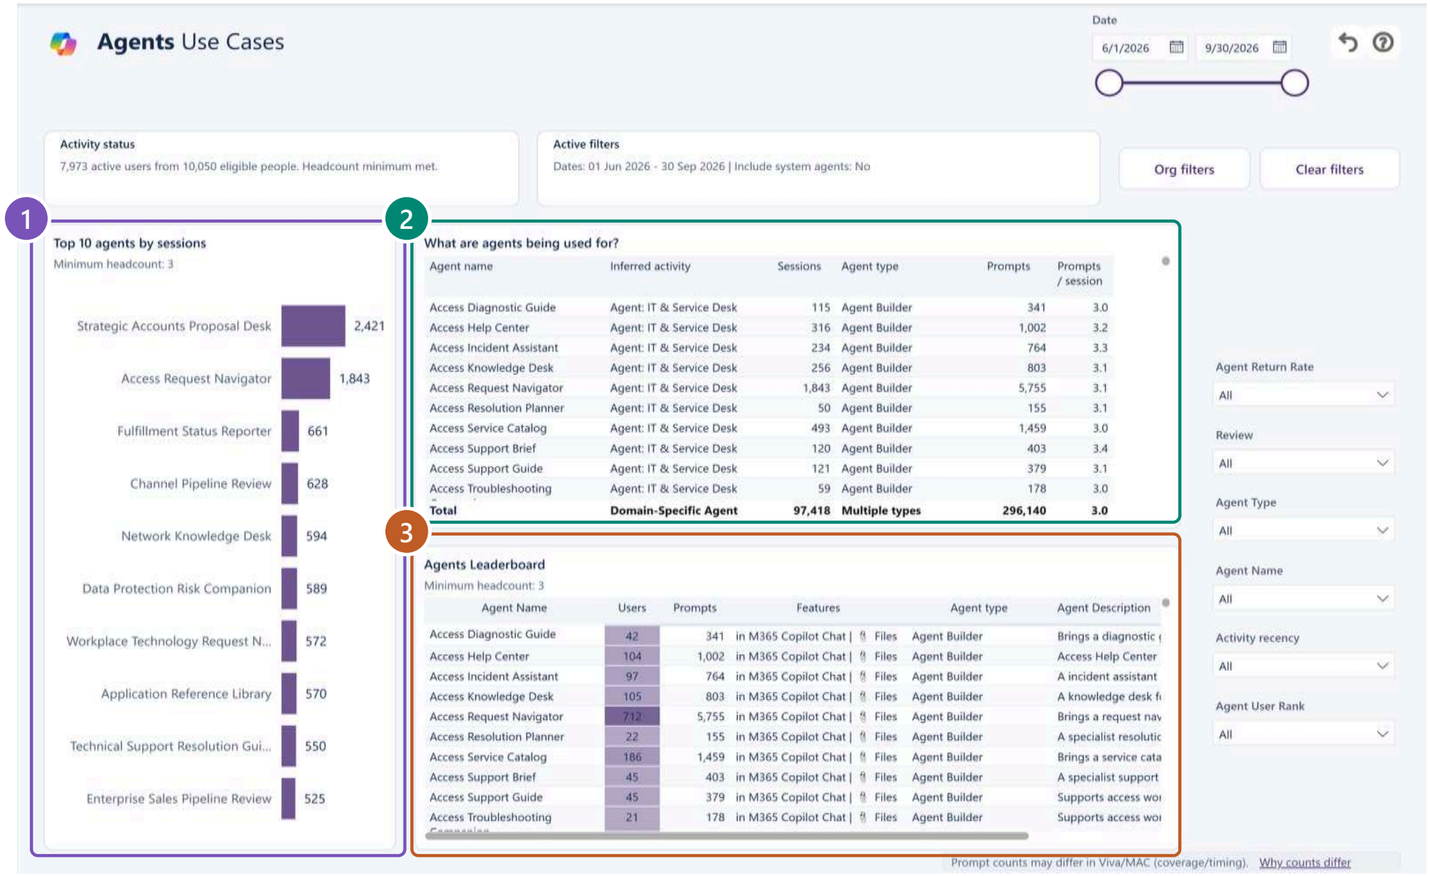

! Read it carefully

High impact uses 100 users and 10 organizations for Microsoft agents, 30 and 3 for Agent Builder, and 50 and 5 for others. These are rules of thumb, not decisions.

TRY THIS Org filters can include system agents; they are not review targets. Security Copilot shows Usage not tracked here. Discuss other labels with owners.

Agents: Use Cases

What might each agent be used for?

1 Top 10 agents by sessions

The agents your selection used most.

2 What are agents being used for?

Each agent with its likely activity categories, conversation counts and type.

3 Agents leaderboard

Users, prompts, listed capabilities, type and description.

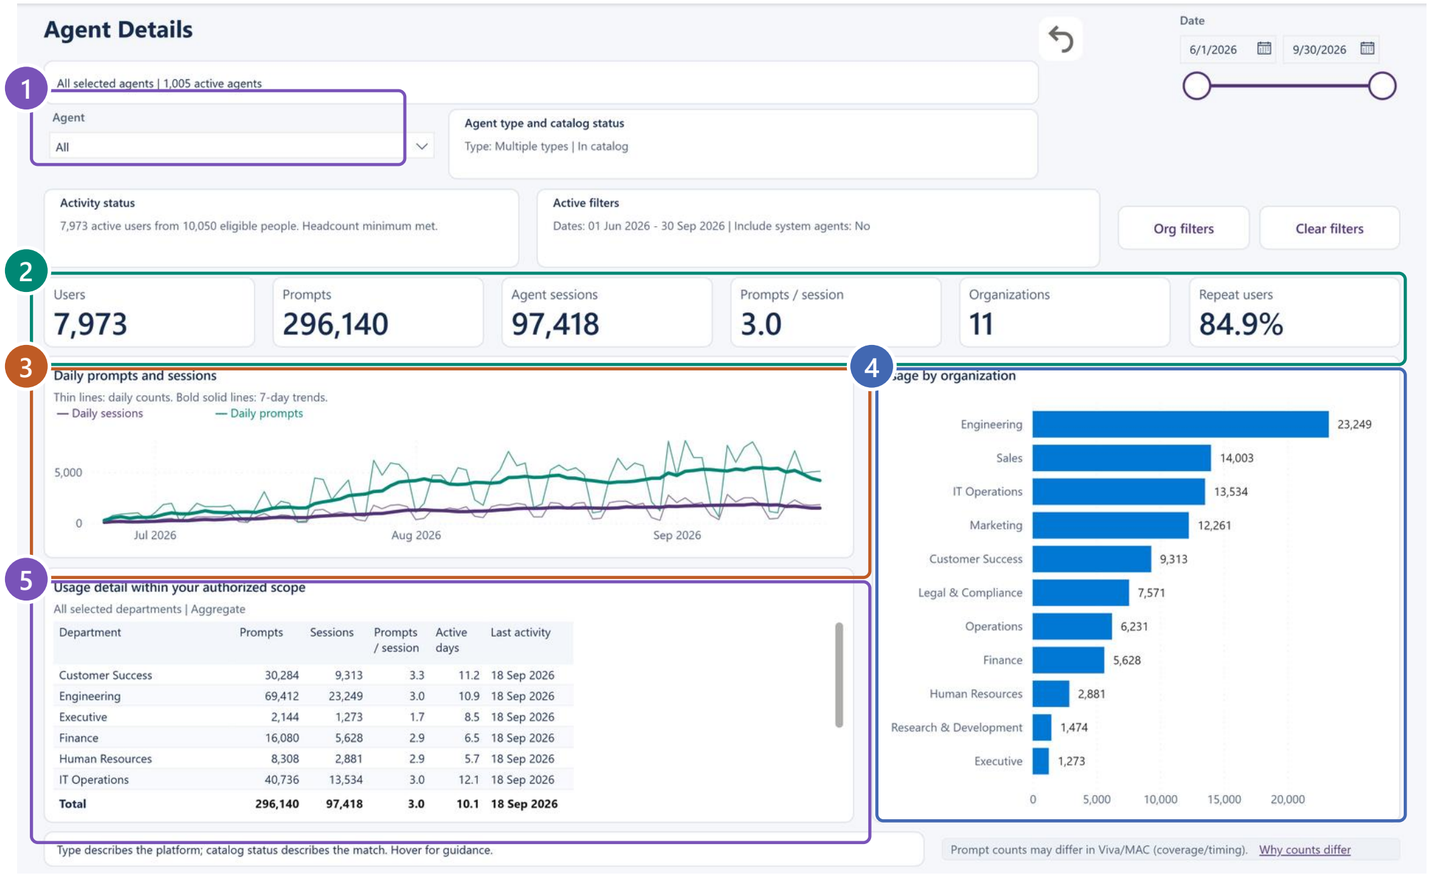

! Read it carefully

Categories come from activity records and agent descriptions. They don't measure answer quality, time saved or revenue.

TRY THIS Choose an agent you know and check whether its categories match what its users say they use it for.

Agent Details

Who uses this agent, how much, where, and do they come back?

1 Agent picker

Choose agents; read type and catalog status beside the picker.

2 Six headline numbers

Users, prompts, agent sessions, prompts per session, organizations and repeat users.

3 Daily prompts and sessions

Daily lines with bold 7-day averages.

4 Usage by organization

Which departments use the agent most.

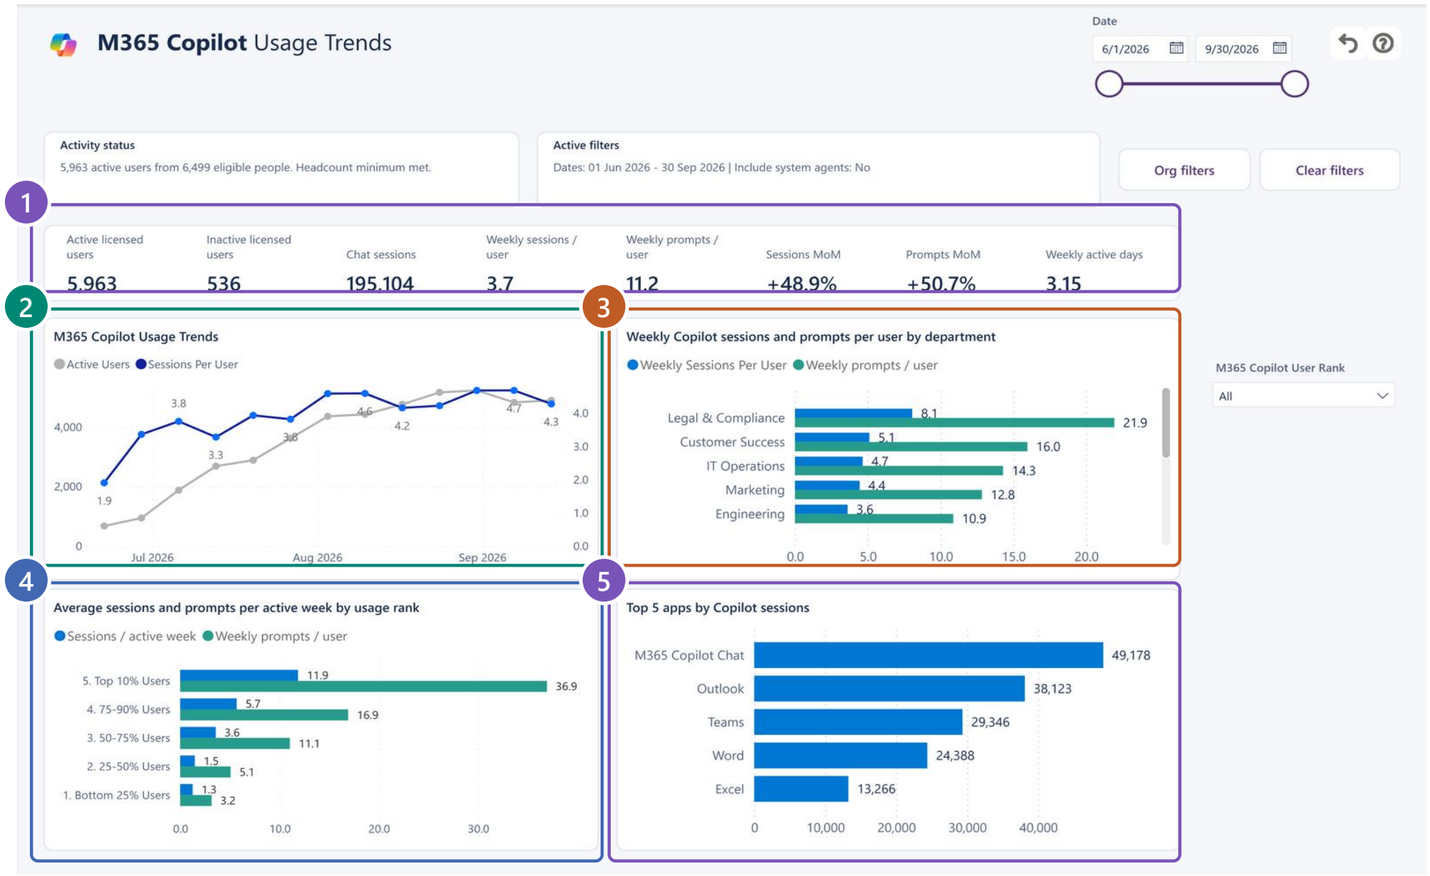

5 Usage detail

Departments, and people when approved, with prompts, sessions, active days and last activity.

TRY THIS From any agent name, right-click > Drill through > Agent drillthrough. Back returns; Explore all agents keeps your team and dates.

M365 Copilot: Usage Trends

How is licensed Microsoft 365 Copilot use trending?

1 Headline numbers

Active and inactive licensed users, sessions, weekly prompts/sessions, prompt/session month-over-month change and weekly active days.

2 Usage trend

Active users and sessions per user, week by week.

3 Weekly prompts and sessions by department

Compare departments of different sizes.

4 Prompts and sessions by usage rank

Prompts and sessions per active week by dynamic band, from Top 10% to Bottom 25%; dates and population determine the bands.

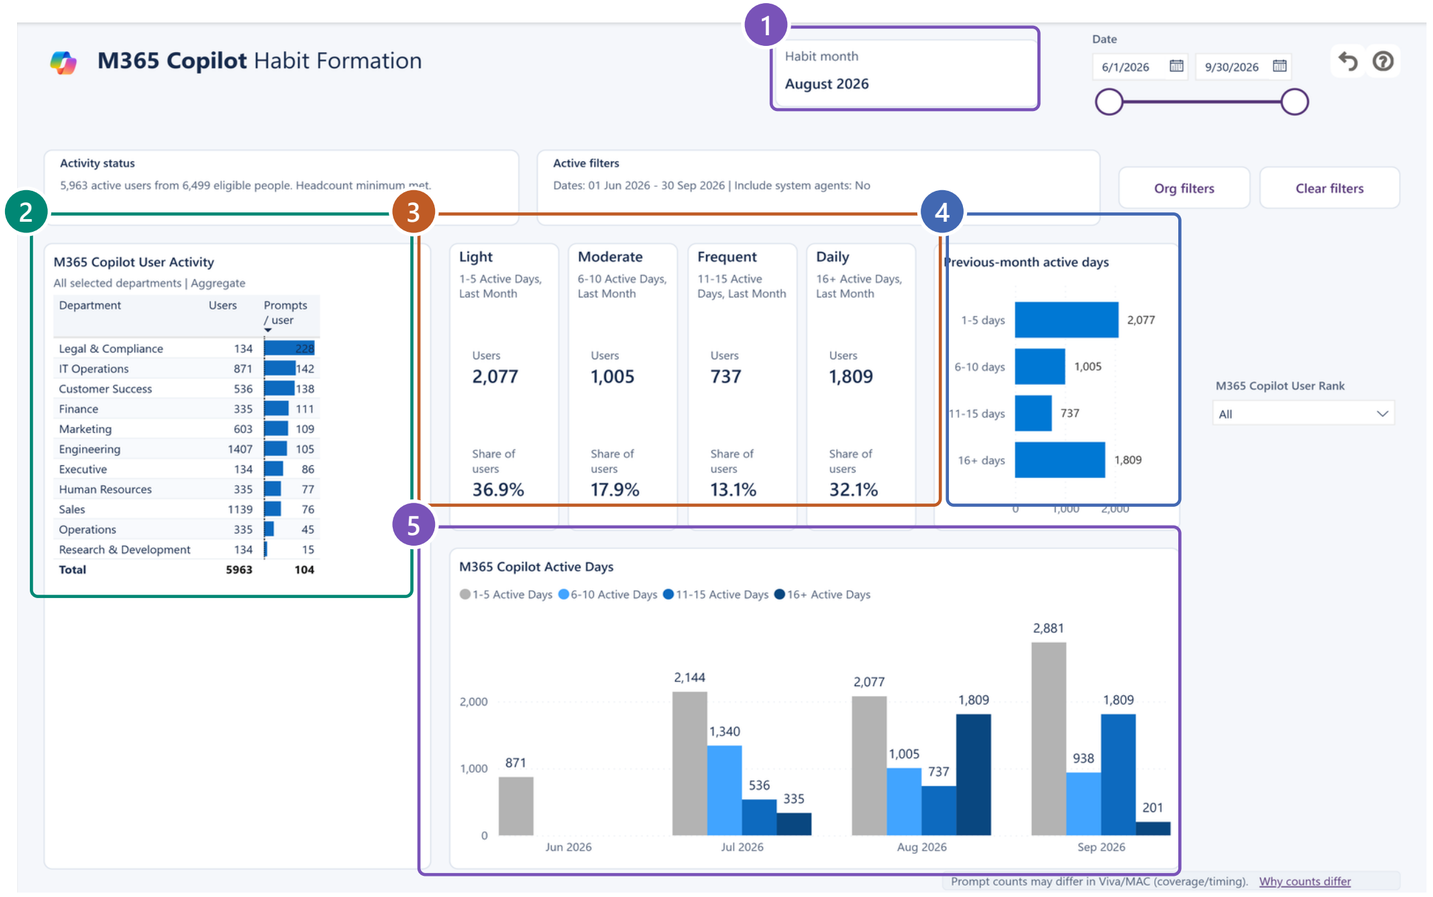

5 Top 5 apps

Friendly app names identify products, including M365 Copilot Chat. Hover for raw AppHost.

TRY THIS Look at users, sessions and apps together, and ask the team what explains a change before drawing conclusions.

M365 Copilot: Habit Formation

Is licensed Copilot becoming a monthly habit?

1 Habit month

The month before the end of your selected dates.

2 User activity by department

Users and prompts per user for your whole selected period.

3 Four habit groups

Light, Moderate, Frequent and Daily, with users and share of users.

4 Previous-month active days

Bars comparing the four groups.

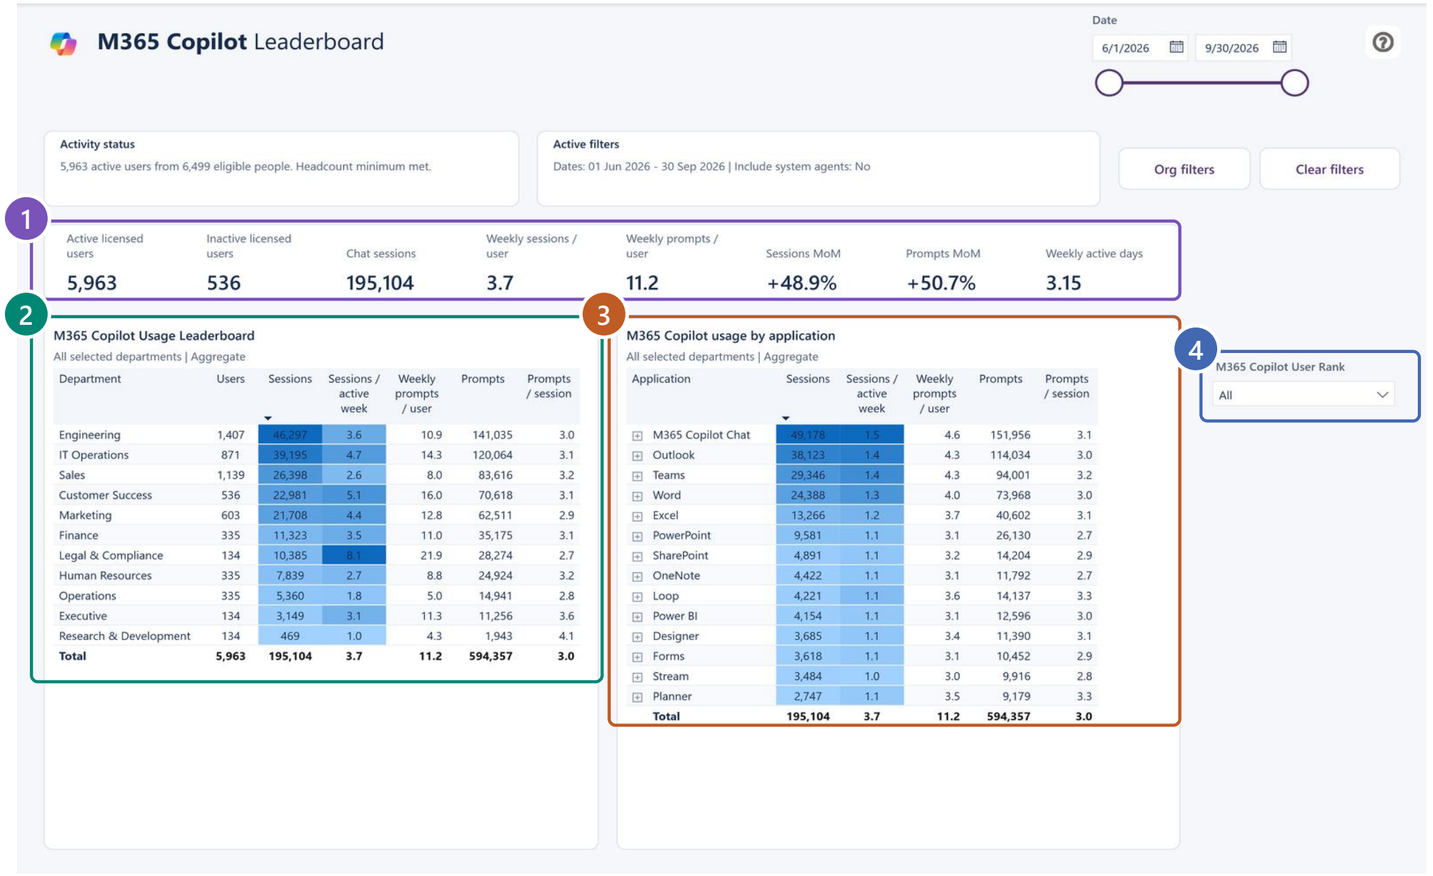

5 Active days over time

The habit mix month by month.

TRY THIS Track the Light group month by month. A shrinking Light share with a growing Frequent share suggests a forming habit.

M365 Copilot: Leaderboard

Which departments and apps lead in licensed Copilot use?

1 Headline numbers

Active and inactive licensed users, sessions, weekly prompts/sessions, changes and weekly active days.

2 Usage leaderboard by department

Users, prompts, sessions and matching weekly ratios.

3 Usage by application

Expand an app to see its departments, and people when approved.

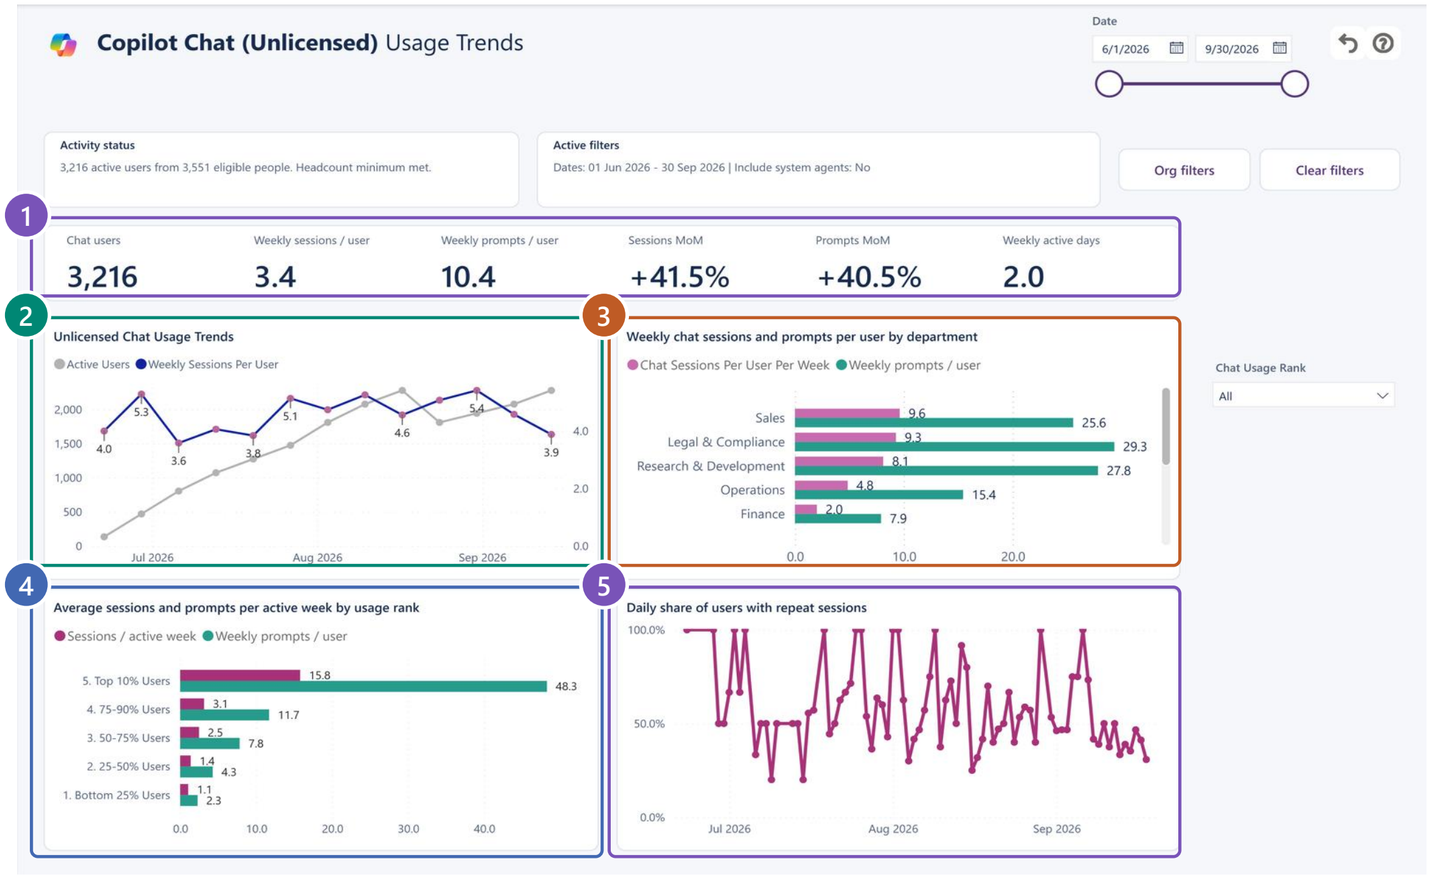

4 Rank filter

Focus on your most or least active users.

TRY THIS Expand a friendly app name, then a department. Hover for raw AppHost; unknown values pass through.

Copilot Chat: Usage Trends

How often do people without a Copilot license use Copilot Chat?

1 Headline numbers

Chat users, weekly prompts and sessions per user, prompt/session month-over-month change and weekly active days.

2 Usage trend

Active users and weekly sessions per user over time.

3 Weekly chat sessions by department

Compare departments of different sizes.

4 Prompts and sessions by usage rank

Weekly prompts and sessions by dynamic usage band.

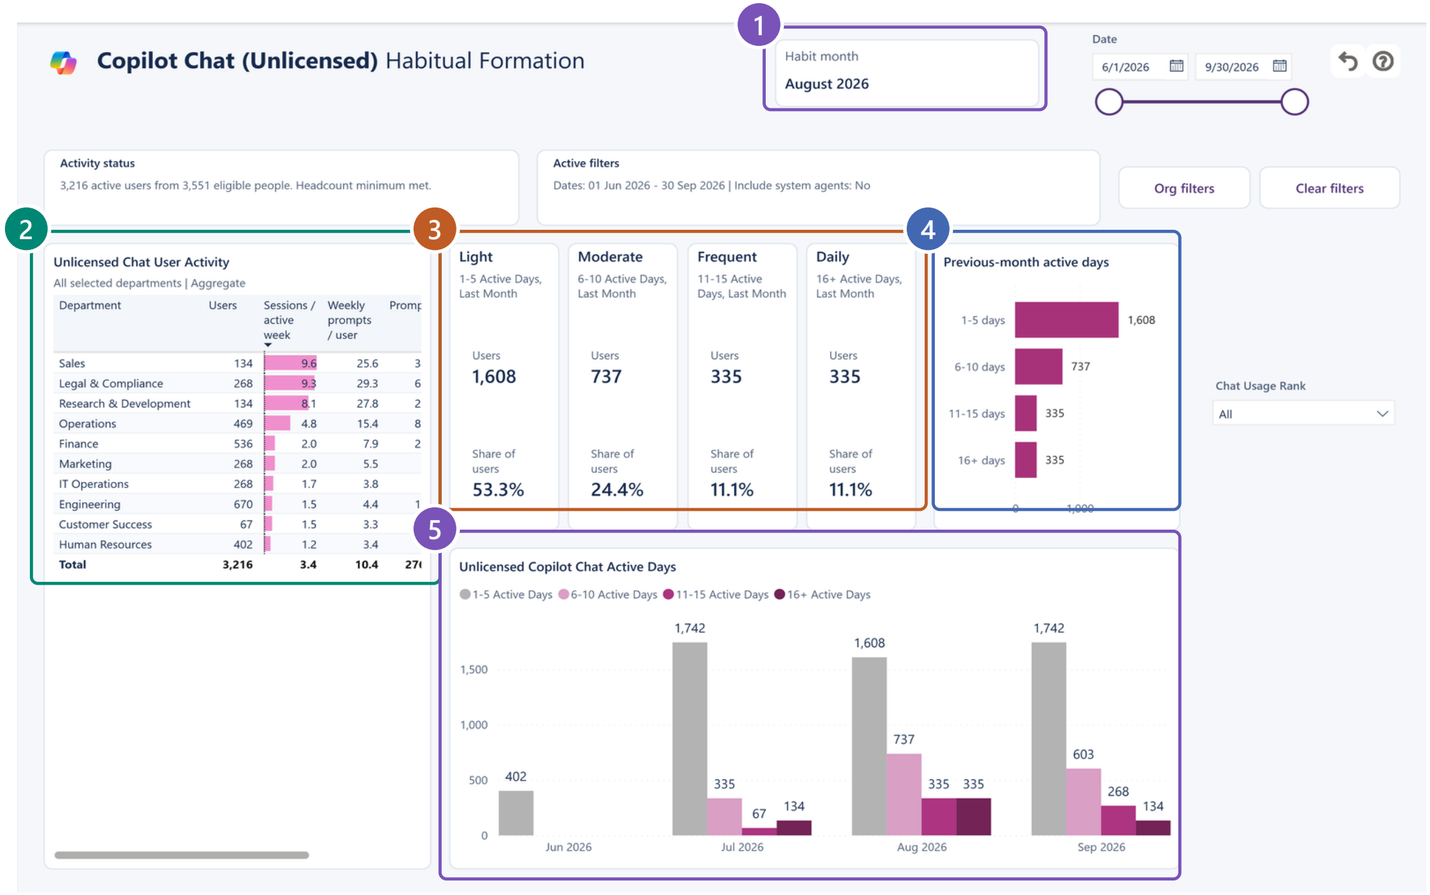

5 Same-day repeat use

Share of that day's active users with more than one session. 50% means half of them, not half the company.

TRY THIS Read the repeat-use line with the weekly trend. A spike can mean useful work, retries or a hard task, so ask the team.

Copilot Chat: Habit Formation

Is Copilot Chat becoming a regular habit?

1 Habit month

The month before the end of your selected dates.

2 User activity by department

Users, prompts, sessions and weekly ratios for the period.

3 Four habit groups

Light, Moderate, Frequent and Daily, with users and share of users.

4 Previous-month active days

Bars comparing the four groups.

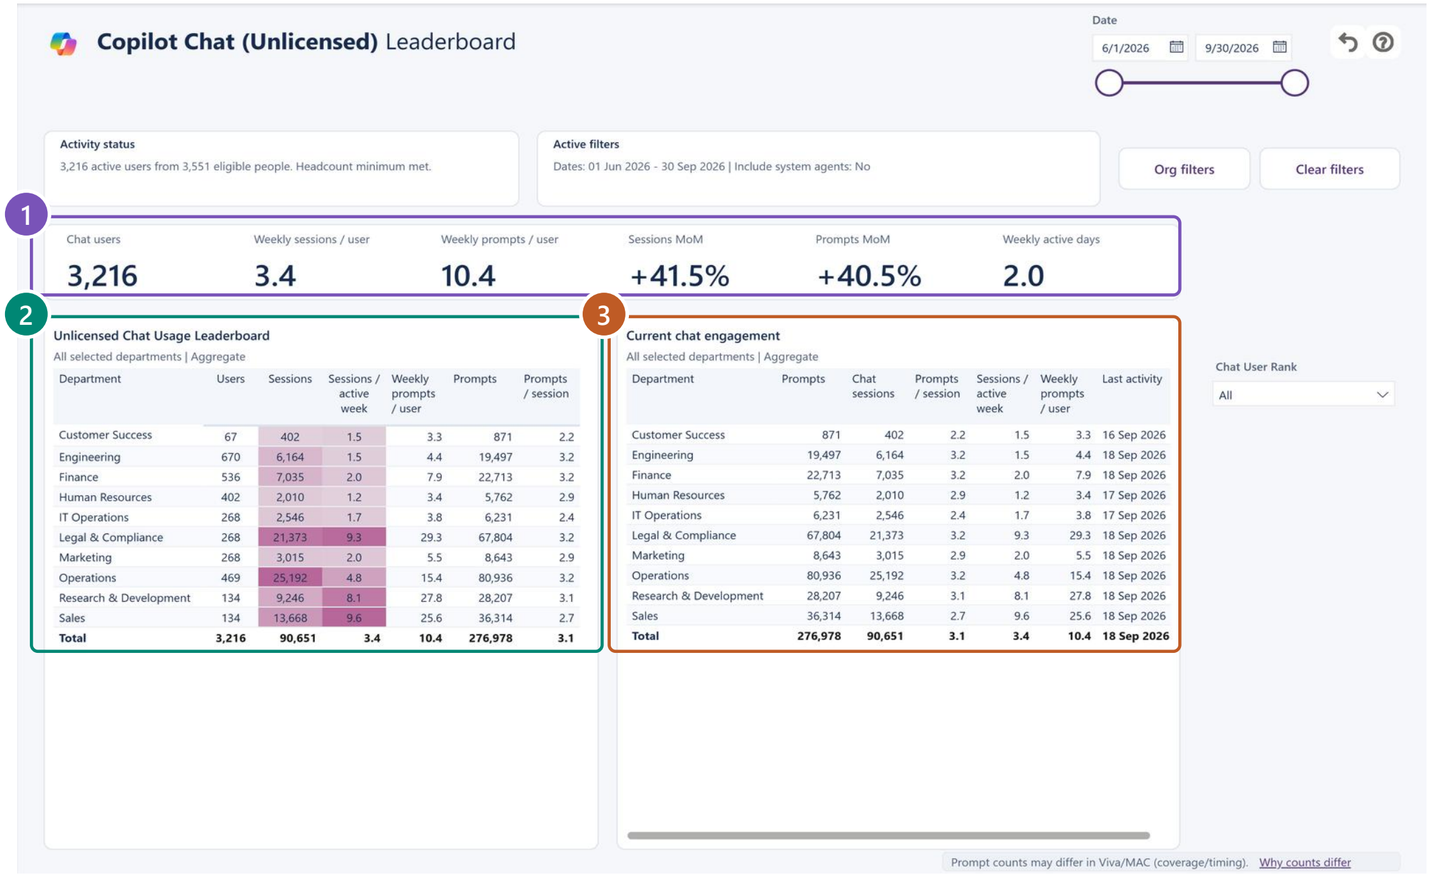

5 Active days over time

The habit mix month by month.

TRY THIS Compare this page with M365 Copilot: Habit Formation for the same team and month to see how habits differ.

Copilot Chat: Leaderboard

Which departments lead in Copilot Chat use, and how engaged are they?

1 Headline numbers

Chat users, weekly prompts and sessions per user, prompt/session month-over-month change and weekly active days.

2 Usage leaderboard by department

Users, prompts, sessions, prompts per session and weekly comparisons.

3 Current chat engagement

Prompts, sessions, prompts per session, sessions per active week and last activity.

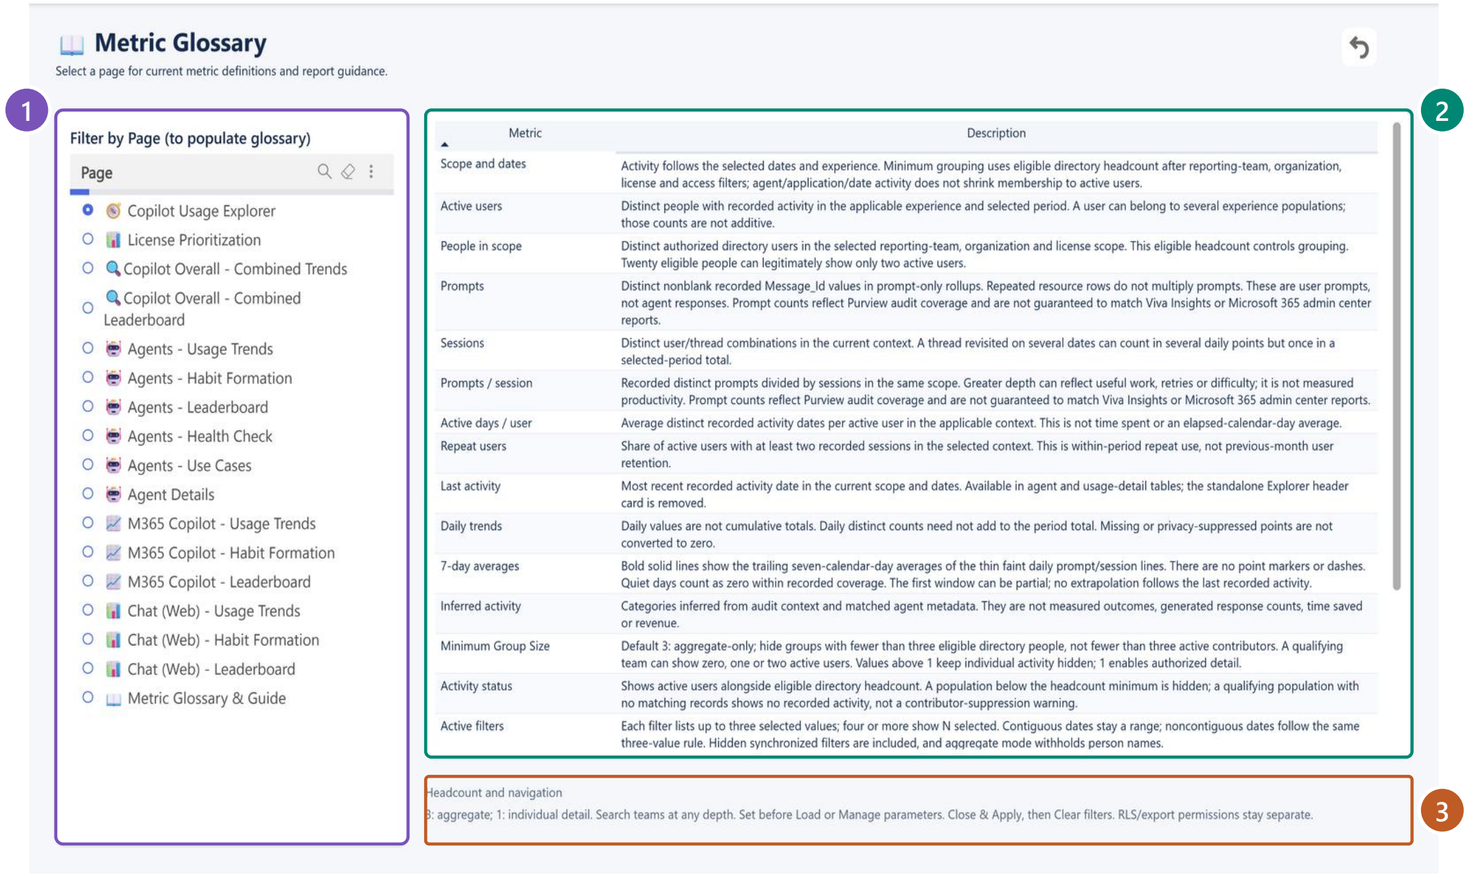

! Read it carefully

These pages count recorded chat only, not agents, Cowork or unclassified activity. People appear only with an approved setting.

TRY THIS Read people, prompts and sessions separately. More prompts can come from more users, longer conversations or retries.

Metric Glossary & Guide

What does this number mean, and how should I read it?

1 Filter by page

Choose any of the 17 pages to see only its definitions. It opens on Copilot Usage Explorer.

2 Metric and description

Includes peer rank, friendly apps, catalog status, system agents and usage coverage.

3 Setup reminders

Short notes on team size, Close & Apply, Clear filters and access permissions.

! Read it carefully

Shared metric names mean the same thing on every page. The rules of thumb used by the report aren't validated benchmarks.

TRY THIS Keep this page open in a second tab while you present, so you can answer "what does this mean?" on the spot.

Common questions

Quick answers to what people ask most when reading the report.

Why don't the user counts add up?

One person can use several experiences, and daily distinct counts don't add up to a period total. Compare side by side.

Why is a group hidden?

It has fewer eligible people than the Minimum Group Size. A group that qualifies but has no records shows no recorded activity.

Why don't the habit cards match the tables?

The cards use the habit month. The tables use your whole selected period.

Why is a licensed person shown as unlicensed?

License status comes from the people file when the data was collected. Ask your admin to refresh it.

Why is an agent's platform or metadata missing?

Check Catalog status: activity-only or ambiguous matches lack reliable catalog details. Store developers are publishers; unknown platforms are labeled explicitly.

Why can't I see By user or employee rows?

Individual detail appears only when the report owner has approved Minimum Group Size 1.

From numbers to conversations

The report shows the pattern. The team can explain it. Agree one change, then look again.

If you see...	Where	Ask the team...
Many licensed users are inactive	M365 Copilot: Usage Trends	What gets in the way: time, training or the type of work?
Frequent chat use without a license	License Prioritization	Would licensed features help this team's regular work?
People try an agent but don't return	Agents: Usage Trends	Does it answer the questions people actually ask?
An agent is labeled Review	Agents: Health Check	Is it still needed, or does it need updating or retiring?
Habits stay Light for months	Habit Formation pages	Which task could become a weekly routine?
Long conversations with an agent	Agents: Leaderboard	Is it doing deep work, or are people retrying?

THEN Agree one change, keep the same team and comparable dates, and ask whether it helped their work, not just whether numbers rose.

What the report doesn't measure

It describes recorded activity. Use it alongside what people tell you.

NOT MEASURED

- ✕ Time saved or productivity
- ✕ Answer quality or accuracy
- ✕ Revenue or return on investment
- ✕ Employee performance
- ✕ Session length or hours of use
- ✕ Agent responses or voice use

KEEP YOUR DATA CURRENT

Refresh on a schedule

PAX or the Fabric notebooks can add each new day. Schedule refresh in the Power BI service to run after that job.

Check a real refresh

Confirm that a scheduled refresh brings in new days. Opening the report on a laptop doesn't prove online refresh works.

Expect some variation

Prompt counts can differ from other Copilot reports because of coverage and timing.

REMEMBER Activity can start a conversation about training, access or agents. Evidence of value needs more than usage totals.

KEEP LEARNING

Clear numbers, better conversations.

Storyboard

A ready-to-present walkthrough for leadership reviews and adoption councils.

Screenshot tour

All 17 pages, in order, with what each one shows.

Metric Glossary & Guide

Definitions for every number, inside the report.
